

thermal efficiency structural integrity

Triple Glazed PVC Slider

Acrylon Plastic's Evolution series window systems have been designed to provide enhanced thermal efficiency and superior structural integrity. Using the highest quality North American PVC resins and state-of-the-art extrusion technology, Acrylon Plastics manufactures profiles with a distinctive gloss finish specially designed to resist damage from dust and harmful UV rays.

Characteristics & Advantages

- Triple glazed sealed units with a 1 3/8" width dimension that allows for full half inch air spaces in-between the glass
- Strength of a 4 1/2" wide multi-chamber frame eliminates uncontrolled expansion and contraction
- Colonial design of the frame perfectly complements all casement windows
- Triple Pane Sliders provide superior thermal efficiency and enhanced sound-blocking properties
- Pressure-equalized drain system channels water away from the interior of the window
- Overlapping meeting rail along with enhanced seals provide maximum sealing performance
- Specialized tandem roller mechanism ensures an easy sliding operation
